

Every winter, employees across local construction works and road maintenance authorities face the trying task of winter road maintenance.

The KommunalHandbuch on winter road maintenance includes accounts of particular aspects of winter road maintenance as experienced by small and large municipalities, but also on federal and district roads and motorways.

With 644,000 km of roads, Germany ranks tenth in the world rankings for road networks*. To keep these roads clear through the winter calls for a great deal of technology – which is clearly and concisely advertised in the KommunalHandbuch for winter road maintenance.

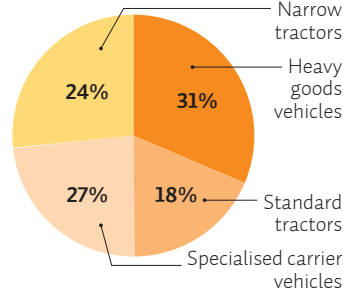

* (Source: CIA World Fact Book 2008)

Today, as ever, winter road maintenance is vital to municipalities:

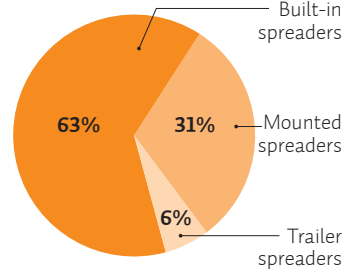

In the KommunalTechnik trend report for winter road maintenance 2018 we surveyed 100 municipalities to find out which technologies are used with which concept. The willingness of municipalities to take part was overwhelming.

Here is an overview of some information:

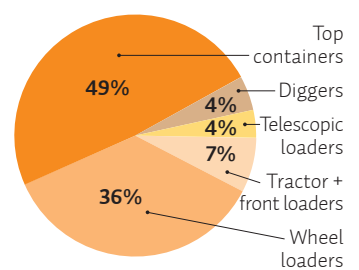

Carrier vehicles in winter road maintenance

Spreaders in winter road maintenance

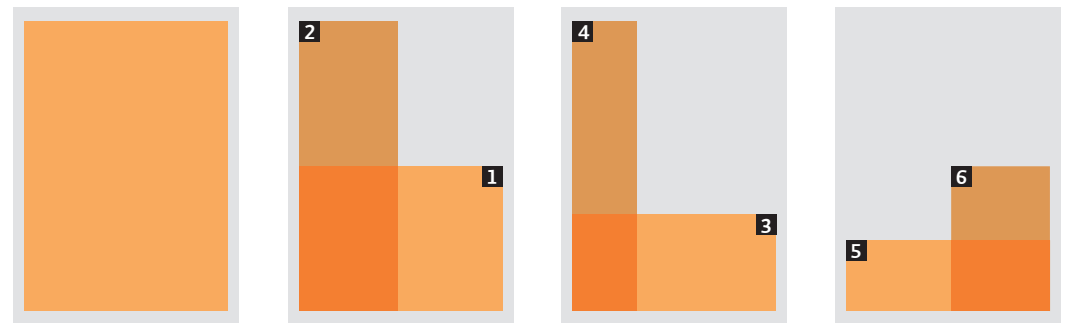

Technology for salt shipping

CLEAR VISION!

To find out what else is happening in the local area or with winter road maintenance, take a look at kommunaltechnik.net.
